Wheel lifter - EPL80 PLUS

N. 21 02/04/2026

We would like to inform you that, starting from middle of April 2026, **EPL80** wheel lifts will be manufactured exclusively in the **PLUS** version.

The new **EPL80 PLUS** represents the evolution of the current model, with improvements in **ergonomics**, **movement smoothness** and **overall build quality**.

Specifically:

- ▶ **New-generation linear guide** rails to ensure enhanced sliding smoothness, improved stability and long-term durability.
- ▶ **Integrated accessory holder** positioned ergonomically for improved workstation organization.

The unit maintains an **80 kg lifting capacity** and is fully compatible across the entire Teco passenger car wheel balancer range.

EPL80 PLUS is the entry-level model within our wheel lift range, yet it delivers robustness, reliability and operator comfort typically associated with higher-segment equipment.

It is the ideal solution for workshops seeking practical operational efficiency, safety and ease of use.
