**WHEEL ALIGNERS**

## **SUBJECT: SOFTWARE UPDATE FOR NEW GENERATION 2-CAMERA WHEEL ALIGNERS**

We are proud to announce the release of software update 04.00.00 for new generation two-camera wheel aligners.

To proceed with installation, go to the Infoauto website, download the update package and install it on the PC of the wheel aligner that needs updating.

The following versions are included in the new release:

- **WheelAI version: 4.00.00**
- **ImageServer version: 7.6.5.0**
- **Service version: 7.6.5.0**

This software update is intended to solve the following issues:

- 1) CASTER ANGLE MEASUREMENT:** fixed an issue that was occasionally causing the caster angle values to block, preventing live display.
- 2) DATA STABILITY:** a new algorithm was introduced to help stabilize and speed up the data-refresh process.
- 3) UNEXPECTED SOFTWARE SHUTDOWN:** Fixed an issue on the site test page that was likely to cause a forced shutdown of the programme.
- 4) AUTOTRACKING FUNCTION (if any):** Improved target tracking in bright ambient light conditions.

We remain at your disposal for any further clarifications.
