

SUBJECT: New accessory: Jaws for reach stacker rims

We are pleased to introduce the new Jaws for Reach Stacker Rims, compatible with all Teco 570 - Teco 580LL - Teco 590 series heavy duty tyre changers.

This handy accessory, placed in the proper seat already present on the jaws of the heavy duty tyre changers models listed above, allows the reach stacker rims without central flange to be clamped safely and very easily.

This special rim shape, available on this type of industrial equipment, must be clamped on the chuck unit of the tyre changer, using the raised profile on the outer rim side.

The unique clamping jaw profile has been designed so that it exactly reproduces the outer rim shoulder profile. The use of this accessory allows the wheel to be clamped on the machine chuck safely and quickly, ensuring a firm hold in both bead breaking directions.

The jaw also ensures effective resistance to possible rotation in case of rim slippage.

This accessory allows working on any type of industrial tyres in a safer, faster and more precise manner, increasing the machine productivity.

The main features of this accessory are:

- Ease of use
- Fast mounting on the tyre changer chuck
- Compatibility with Teco 570 (all versions), Teco 580LL, Teco 590 series models
- Increased productivity
- Work precision
- Clamping safety

Recommended for users carrying out maintenance of industrial vehicles in port areas, terminals, rail yards or heavy material sorting areas.

Accessory code: **8-12100188.**

The kit consists of 4 extensions made of high-resistance material, to be fitted on the tyre changer jaws.

At the end of the operation, the 4 extensions can be easily removed and stored on board the machine.
